

SECURE IT ASSET DISPOSITION

Alamon ETS provides certified data protection, documentation, and IT asset disposition services.

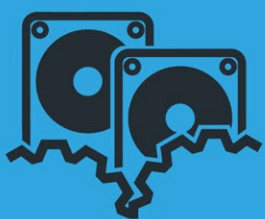

DATA SECURITY

The security of the data that resides on your physical IT network equipment is priority #1, no matter where it is or what you are doing with it.

ETS understands that your data needs to be protected at all times. Whether it is legacy data stored on corporate server hard drives to confidential configuration instructions residing on firmware inside IT equipment, ETS knows how to safely manage and control the physical assets that hold it. We follow strict NIST 800-88 guidelines for erasing data and adhere to security protocols, whether the equipment is active technology or being retired.

Our custody of your sensitive data hardware is meticulously documented, and a detailed list of items collected and handled will be provided along with a certificate of destruction upon completion.

All ETS ITAD technicians are extensively vetted and submit to thorough background checks.

ITAD SERVICES

PHYSICAL REMOVAL OF IT ASSETS

- Removal and pickup of non-sensitive IT assets to local e-cycling facility
- Separate and return specifically identified IT assets to corporate/other for redeployment
